

I have been a licensed radio amateur for 62 years---Also a Broadcast Engineer and Electronic Equipment Designer. In my long experience, I have found that any form of r.f. transmitted over Power Lines has the ability to radiate and be received for some distance from the a.c. lines in question. I feel that any digital signal sent via the power grid has a definite chance of creating interference to AM Broadcast reception, TV reception and Amateur Radio Reception.

I am very much opposed to the FCC allowing any form of Broadband Digital transmissions to be sent via Public Utility Power Lines.
